

FETAL MONITOR SONICAID TEAM

SonicaidTeam

The Sonicaid Team range is designed for simplicity in fetal monitoring. Developed in collaboration with leading obstetric specialists, the small, easy to use and lightweight unit can be transported effortlessly within hospitals, to clinics, doctor's offices or even to the home.

- Compact & lightweight
- Twin fetal heart rate scales provide the clearest differentiation between two heart rates and avoid the difficulty of interpreting offset or overlapping traces
- Easy to use menu system allows fast access to important functions
- Large illuminated display provides clear monitoring at a glance
- Modem and network connections for remote and integrated obstetric management
- Graphical display showing on-screen FHR and Toco traces continuously updated
- The unique antenatal analysis (Care option) ensures a consistent approach to reading fetal heart rate patterns by all staff
- 6 hour trace-memory with fast-print facility
- Records can be annotated from a library of clinical notes available at the touch of a button
- Automatically record fetal movement with Actogram

Team

Antepartum Singleton Monitoring

Ideal for your basic monitoring needs during pregnancy, Sonicaid Team provides the functional versatility of the 'Team range'. Ultrasound, external Toco and fetal event marker.

Team Duo

Antepartum Monitoring for Twins

Team Duo features an additional ultrasound channel allowing accurate assessment of twin fetal heart rate.

Team DM

Antepartum Distance Monitoring

Maximising the superb portability of the 'Team range', Team DM provides remote monitoring of fetal heart rate away from the hospital environment.

Team IP

Basic Intrapartum monitoring Fetal monitoring during admission, labour and delivery. Team IP is an ideal entry-level monitor offering fetal and maternal ECG plus intra-uterine pressure in addition to twins monitoring.
